
Each fix on the right removed one stall cause the logs showed (planner_fixes.tex): random paths never go around the letter, the elite average blurred distinct pushes, phantom pushes while hovering, a distance penalty that made going around too costly, a weak reward for the last 1-2 px, and a pose error measured at corners. Data: teacher_planner.csv (LEARNING_EXPERIMENT_LOG.md section 7, LEARNING_FINDINGS.md section 5).
