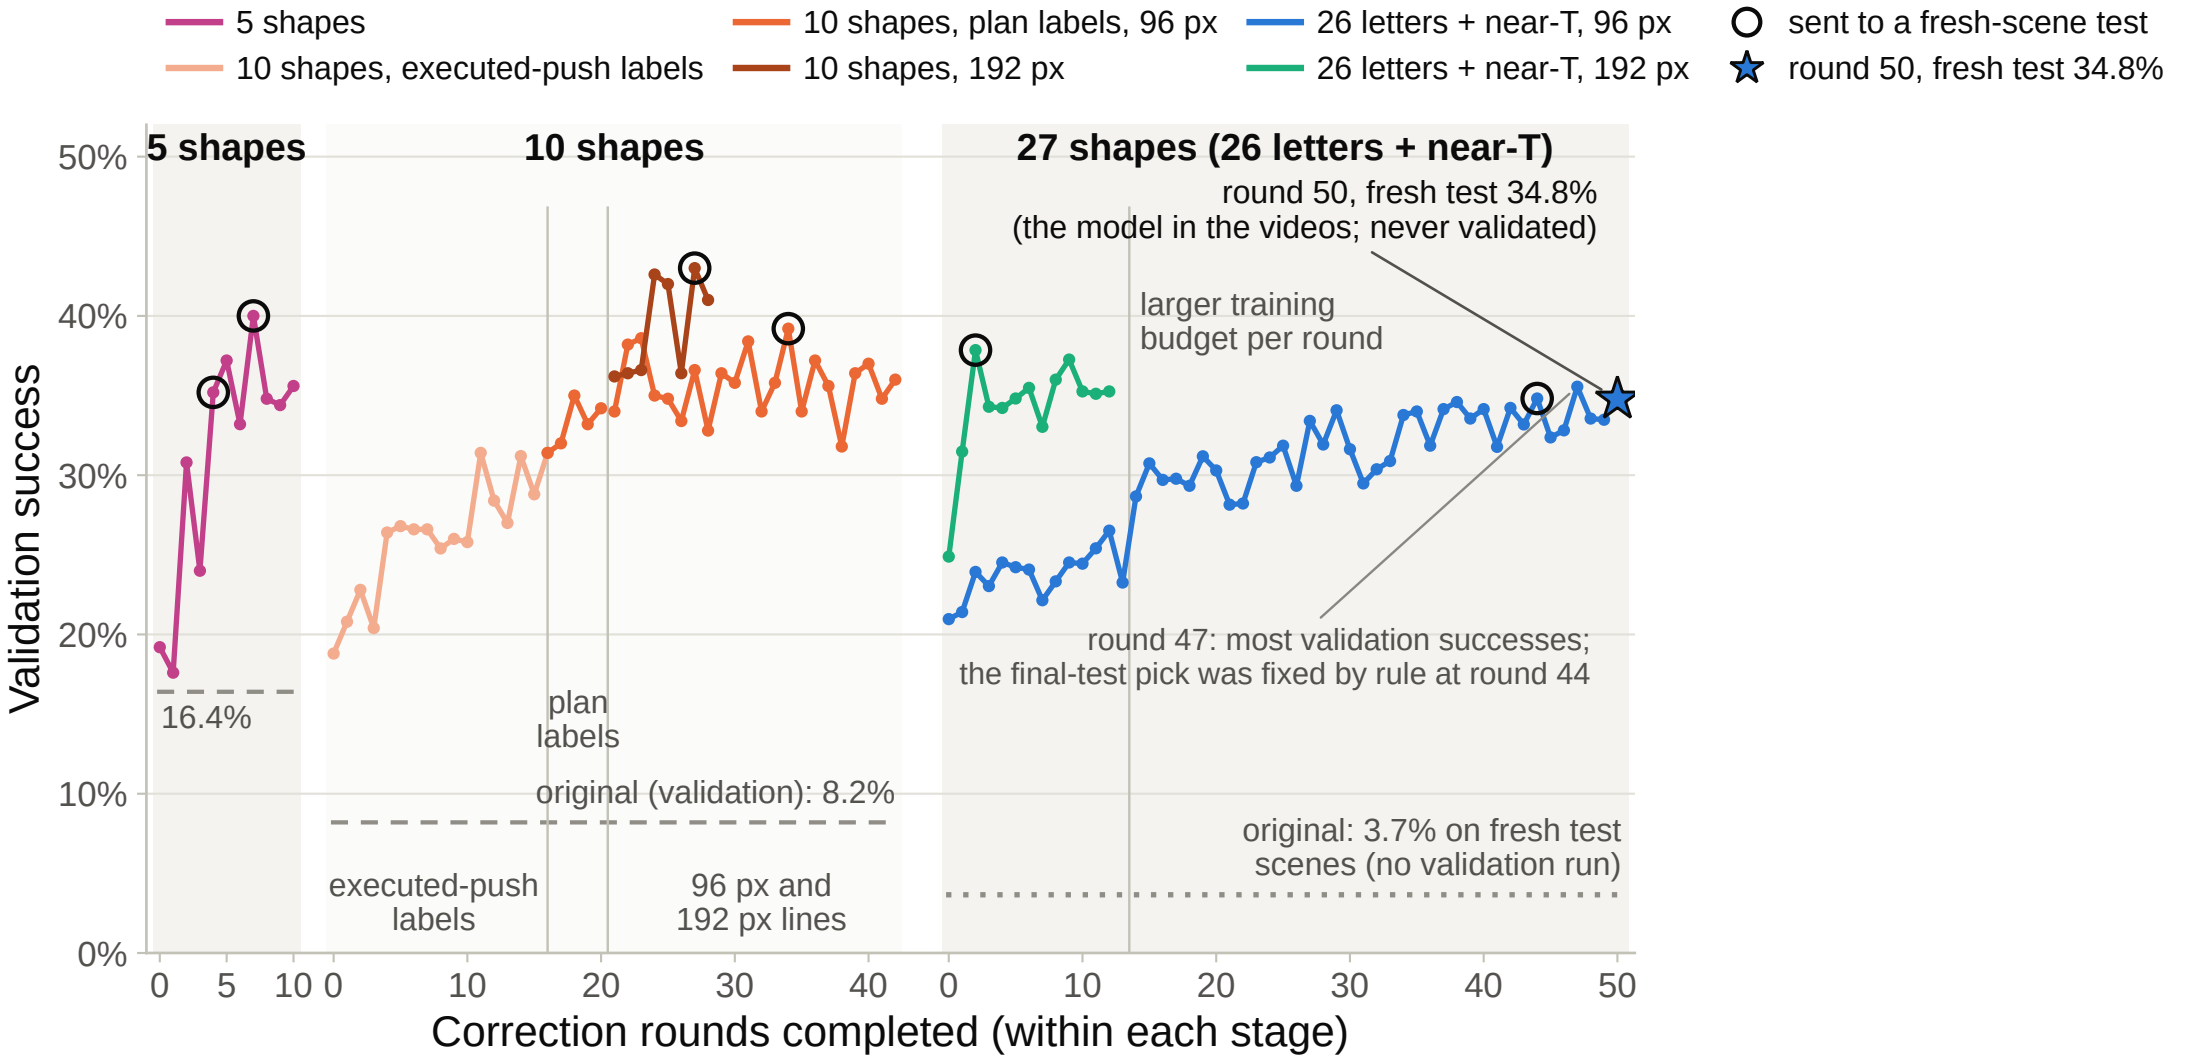
Validation success through all three stages



Validation: 50 fixed scenes per shape, averaged over the stage's own shapes; x = correction rounds completed in that stage (round 0 = the student before any correction round; for 5 shapes, the copy-the-teacher student the rounds started from). Dashed: the original policy on the same validation scenes (5 shapes: 41 of 250; 10 shapes: 41 of 500). The original was never run on the 27-shape validation scenes, so the dotted level there is its fresh-scene final test (D051). Round 50 was never validated either: the star is its own fresh-scene test (D054, a different scene pool).
